

Introduction to Web Development

Student Name: FERNANDA DE SOUZA VIEIRA

Student Number:d00264659

Lecturer(s) Name: Muhammad Sarmad Ali

Report CA2: Client-Side Website Assignment.

This report is based on the development of a website for an animal rescue in the city of Drogheda Co. Louth, the Drogheda Animal Rescue. I have based my first assignment on a cause that I believe.

My primary goal was to develop a clear and easy navigation flow, where the user feels free to explore with real information about the cause and follow a good design as well using the real color and logo of the rescue.

On the website, you can find a navigation bar, all the real social links of the Drogheda animal rescue, as well as videos and a map of the headquarters location all this using only HTML and CSS.

On the content side, you will be able to understand how the Drogheda Animal Rescue Works on a daily basis, some useful information about dogs and cats, how you can help them, and the real contact number, this website I believe if put up on the web could be better than what they have now.

Hope my assignment meets all the marks and shows the developing skills that I have learned in class till now.

Here you can access my website hosted on GitHub pages:
